SPEEDLOGISTIK

Over 50 years at your service

Our story began in the 1960s in the traditional transport service, in which we operated as Autotrasporti Colcera; then, in the 1980s and 1990s, in order to be able to respond to customer needs, the company developed Groupage services throughout Europe, characterised by the speed and punctuality of deliveries and a wide range of assistance and consultancy services for the export of goods. In 1985, the Colcera family incorporated the Speed Service company and, subsequently, when Express 24H services began to spread in Italy, and international traffic began to intensify and the offer of air and sea services operated through a network of reliable partners began to become popular, they incorporated Speed Service International. In the years that followed, they added integrated logistics services to their offer, moving from the traditional warehouse storage service to the customised management of the customer's goods, through the implementation of dedicated logistics management procedures, the use of proprietary WMS software with functions that are always adaptable to the specific needs of the individual customer, and with technologically advanced goods registration systems. Developments in the sector therefore made it necessary to set up an autonomous and specialised operating division for the provision of logistics services, which led to the creation of EsseElle - Servizi e Logistica. In December 2016, Speed Service International and EsseElle - Servizi e Logistica, merged together to create **SPEEDLOGISTIK**, which is now an integrated supplier of logistics and distribution, transport and shipping services, at both national and international level.

***SPEEDLOGISTIK* is Your “Exclusive Logistics & Distribution” Partner!**

EXPERIENCE - PROFESSIONALISM - SKILL - QUALITY - RELIABILITY - FLEXIBILITY - EXCLUSIVITY - SAFETY

THE ADVANTAGES OF LOGISTICS OUTSOURCING INTEGRATED WITH DISTRIBUTION

Running costs optimising

Flexible management costs proportionate to actual goods production and handling levels, elimination of structural costs and implementation of economies of scale. Logistics services at a certain and defined unit cost per SKU, for accurate company budget planning.

Enhancing the Core Business

Entrusting a technical and residual phase of the production cycle to logistics and distribution professionals.

Cutting-edge technologies

High-tech IT systems and equipment adapted to the specific needs of each customer.

Zero Error Operation

Maximum control over the goods at every stage of the logistics and distribution process, thanks to product registration and identification systems for each individual unit of goods. .

Infrastructure Security

Warehouse facilities equipped with anti-intrusion, fire-fighting and anti-robbery systems, with access codes to storage rooms and video surveillance areas.

Efficient Transport and Distribution at Preferential Rates

We transport and distribute the goods entrusted to us by selecting the best haulage options and the air and sea routes most suited to the customer's needs, at preferential rates, with an experience of service spanning over 50 years. Customers no longer need to worry about the management of the distribution phase, which includes goods collecting at the warehouse, issuing of transport documents, final delivery to the customer, shipment tracking and dedicated customer care services.

Full Customer Control over Products

At any time and wherever you are, you can access the E-Service platform in the Customer Area of our website and monitor every phase of the work cycle online. It is possible to view, extrapolate and print the data relating to the goods entrusted to us in real time, to see the exact minute/second in which a single unit of goods entered logistics, to know which pallet it was placed on, which warehouse shelf it is on, whether it was picked and packed, whether it was made available for shipment, whether the transport documents were issued, whether it left the warehouse and whether it was delivered to its destination.

Without having to send e-mails, make phone calls, or wait for a reply, you can obtain all the information about the goods entrusted to us, in Real-Time, simply by querying our E-Service platform

LOGISTICS PLANNING

We work with you to design the most suitable logistics process for your company's needs. We respond promptly to all service requests. We adapt our systems to your management needs with **Adaptive Logistics** criteria that meet current requirements with a view to the future development of your business.

An exclusive and tailor-made service for your company.

- **Analysis and Consultancy Services**
- **Logistics and Distribution Services Planning**
- **Logistics Site Design**

Our project management software for logistics and distribution:

All **SPEEDLOGISTIK** processes including planning are **ISO 9001 CERTIFIED**.

INBOUND LOGISTICS

Supplier order management

Our logistics project management systems allow us to receive all your orders, either at the beginning of the season in bulk, or as they are generated, and to track the arrival of individual packages into logistics on the basis of the data transferred to us.

Goods Receipt and Quantity and Quality Control Services

Upon receipt, all goods are sorted and their quantity and quality checked, in order to identify any data discrepancies at unloading, or damage that would prevent delivery to the end customer. We also offer sample checks and product repackaging services.

Product Entry Registration with both Barcode and RFID systems

Product entry into logistics can be either Barcode or RFID tagged. Inbound labelling services are also available, as well as data storage and the supply of microtags for radio frequency logistics management.

Traceability of Batches and Goods Status

From the very first moment goods arrive at our warehouses, our management systems are able to identify products according to their production date and origin. The integrity of the goods is meticulously checked according to standardised procedures that provide immediate communication of non-conformities to the customer, placement in a Quarantine Area and the assignment of a “GOODS STATUS” to the product in storage.

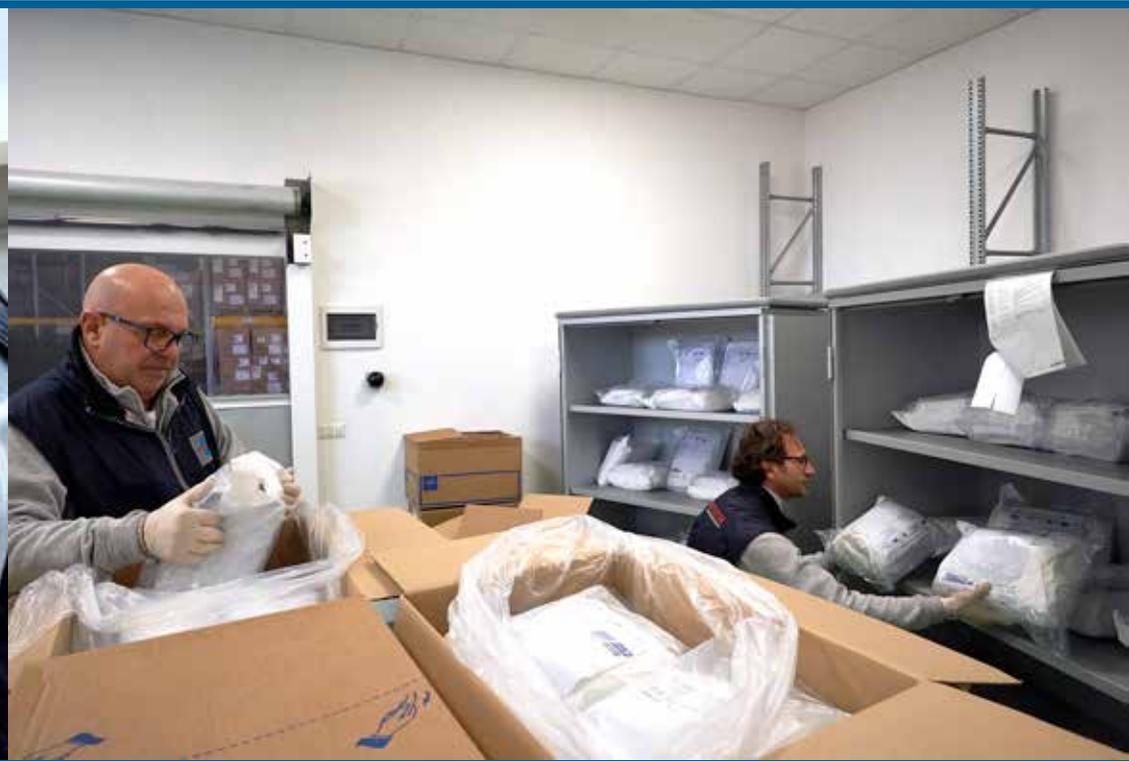

Returns Management

The delivery of returned goods to logistics is registered separately from that of incoming goods from suppliers, and the products are subject to quantitative and qualitative checks and, if necessary, repackaging.

PORTATA
MASSIMA

WMS MANAGEMENT AND ANCILLARY PROCESSES

WMS Management

SPEEDLOGISTIK Warehouse Management System includes the management, control and optimisation of complex warehouse and distribution systems. System operations include both elementary warehouse management functions, such as quantity and warehouse management, and more complex functions that make use of methods and/or means capable of meeting the required quality standards, and which naturally lead to the optimisation of logistics costs, such as the adoption of multilevel logistics management, a first level management by box-unit and, only when necessary, following carton breakdown, single-unit management.

Warehouse Features

Customer goods are placed in the warehouse in mapped areas with a guarantee of availability of the amount of space agreed with the customer and with the option of increasing volumes. It is possible to request an **Exclusive Area** for one's own goods. Management of non-conforming products in the **Quarantine Area**. Warehouse equipped with shelves, goods lift, temperature and humidity controlled cold room, handling equipment able to manage various types of products. Warehouse authorised and managed with **HACCP** system and **Pest Control** procedures.

Management of "Single Serial Number" products - Serial Number Control

Logistics management of goods according to the specific needs of the individual customer: by pallet, by box, by single unit, by destination, by article, size, variant, reference, production batch or expiry date. The entire logistical processing cycle is based on a management system with identification of the product articles with a **"unique serial number"**: each individual article remains distinct and unrepeatable and is always traceable (Serial Number Control of each individual unit of goods).

Stock and Periodic Inventory Management

Management of warehouse stocks in **FIFO** (first in, first out) mode, **LIFO** mode (last in, first out), **FEFO** (first expired, first out) mode. Various types of inventory in real time with data feedback according to specific customer requirements.

Stock and Restock Management - Post Sales

Separate storage for returns management, dedicated production launches and stock. Your customers or your agents can check the availability of stock on-line, also through product pictures, for immediate restocking that does not draw on the resources in stock coming from the supply-chain and intended to meet customer orders for the current season.

Ancillary Processing

Product assembly and packaging - Neutral or customised strapping services - Cellophane wrapping to improve the security and/or stability of the goods - Availability of other ancillary processes to be agreed with the customer.

OUTBOUND LOGISTICS

Customer Order Management

Processing and execution of shipping orders received from the customer, either on the basis of sales schedules provided at the beginning of the season or in execution of individual instructions given from time to time.

Picking-Box e Picking-Packing

Picking-Box processing: picking up of goods to be made available for shipment as part of a logistical process that does not require handling of the product. The goods leave the warehouse in the state in which they entered.

Picking-Packing operations: The goods arrive in bulk or in cartons/pallets to be broken down. They are then sorted into individual items, put into storage, picked according to customer instructions, and finally packed.

Packaging

We offer tailored packaging services able to protect the goods efficiently as they leave our warehouses. Packaging of various sizes and thicknesses, **Wine-Box**, **Fill-Air**, **Strapping**, **Cellophane wrapping**, **Labelling** and **Packaging Customisation**.

Shipping Order Management

Once the picking process has been completed, the goods can be shipped on the same day or put into storage in the **Shipping Area**, available for scheduled deliveries or for which customer instructions are still pending.

Transport Documents

Processing and printing of shipping labels, waybills and delivery notes.

DISTRIBUTION

SPEEDLOGISTIK is a forwarding and road haulage company, **registered in the National Register of Road Hauliers for Third Parties**. It has its own fleet of vehicles for distribution and/or collection of goods and is a partner of both national and international couriers and transport companies of the highest level, able to ensure a fast, reliable and safe distribution service in Italy, Europe and worldwide. Customers can count on a wide range of distribution services and deal with the staff at the **Shipping Office**, safe in the knowledge that they can count on the professionalism of those who have been working in this sector **for over 50 years**, responding to the requests of particularly demanding customers, such as those in the **Fashion, Medical, Food & Beverage** sectors. For each destination, the haulage option or air or sea route most suited to the customer's needs is identified and all tracking information is available in real time.

- **24H Distribution Services**
- **Priority Services**
- **ALL-RISK Insurance Services**
- **Supermarket/Mass Retail deliveries**
- **Deliveries by Appointment**
